

Energy Surcharge Schedule

Our Energy Surcharge moves with the price of diesel. When fuel costs fall, the surcharge falls with it, and when diesel is \$3.50 per gallon or below, it comes off your invoice entirely. The schedule below shows the standard published rate at each diesel price, as a percentage of your invoice subtotal.

* The schedule shows our standard published rate. Many accounts are on a reduced schedule that uses the same national diesel price and the same \$3.50 starting point. Your invoice shows the rate that applies to your account, and we will provide the diesel price and calculation behind any invoice on request.

* The full schedule is set to the cent from \$0.00 to \$15.00 per gallon. Above \$9.00 it continues on the same pattern, rising 5.4 percentage points for every additional \$1.00. The table above is abbreviated for readability.

* Rates update weekly from the U.S. Energy Information Administration (EIA) national average on-highway diesel price. For accounts on our compliance program (Auto Charge), the rate is set once a month, using the first EIA price published that month.

* Rates are percentages of the invoice subtotal. Calculations may vary based on the terms of your individual service agreement; the rate stated in your agreement, or as otherwise agreed, and shown on your invoice governs.

* The percentages and this schedule may be changed at the discretion of Liquid Environmental Solutions. To the extent required by your applicable customer service terms, your consent to the Energy Surcharge, and any changes to it, is effective upon your payment.
